      <head>Project Description</head>
      <description>LibData is a library-oriented, Web-based application which provides authoring environments
        for subject pathfinders (Research QuickStart), course-related pages (CourseLib) and general-purpose
        Web pages (PageScribe). LibData encompasses all of these applications, but a typical installation need
        only take advantage of one or two of them -- great local variation and emphasis is possible.</description>
